# One form. A family of tools.

A precise, open identity for CMMF and the tools around it.

Approved symbol / warm gradients / contrasting type

# Quiet confidence, useful everywhere.

CMMF is a shared foundation for working with content models. The identity should make the ecosystem easy to recognise and each tool easy to distinguish.

## Precise

Clean geometry, clear hierarchy and generous space.

## Open

Use direct language and tangible examples. Invite people to work with the model.

## Connected

One symbol and one typographic relationship across every tool.

Use: “Define a field.” “Review the model.” “Export your work.” Keep promotional claims out of interface copy.

# The ecosystem shares a silhouette.

CMMF

CMMF Studio

CMMF Generator

Colour and name identify the tool. The contour stays fixed.

Use the core CMMF signature when speaking about the whole ecosystem.

# A signature for each space.

Horizontal / preferred when width permits

Compact / two lines beside the symbol

Symbol / icons

Stacked / covers and narrow formats

Wordmark-only masters are included for constrained headers. Use the complete signature when the audience needs the tool name.

# Introduce the name before the initials.

## Content Model Master Format

Use the expanded signature when introducing CMMF to a new audience: the opening slide of a talk, a first-use overview or an explanatory cover. Later slides and familiar interfaces can use the core signature.

The expansion is Source Sans 3 Medium, not a tool name. Keep it on one line. Minimum width 420 px; use at least 880 px on a 1920 px presentation canvas.

# Space is part of the mark.

x = visible symbol height / 8

Keep at least x clear around the visible artwork of every lockup. File canvases include some padding; add the remaining space in the layout.

## Minimum digital widths

Symbol 16 px; 24 px preferred in interfaces.

Horizontal: CMMF 112 / Studio 220 / Generator 260 px.

Compact: CMMF 112 / Studio 144 / Generator 170 px.

Stacked: CMMF 96 / Studio 160 / Generator 190 px.

For print, use a symbol at least 5 mm high; proof the full signature at its intended size. Never compress a lockup to fit.

# Warm colour, controlled contrast.

## CMMF

#BA5579 / #D07748

Name on light: #192329

Name on dark: #FFFFFF

## Studio

#8362B7 / #C1639A

Name on light: #945D9C

Name on dark: #AD76B3

## Generator

#248C9F / #399B77

Name on light: #2B7D77

Name on dark: #35978E

Paper #F6F7F3

Ink #192329

Two stops, bottom-left to top-right, sRGB. Use gradients for the symbol and large graphic fields. Tool names use solid companion colours. Body text uses Ink or Paper.

Use supplied dark variants on Ink and light variants on Paper. Other backgrounds need a contrast check.

# Three families. Clear responsibilities.

CMMF

Reem Kufi Bold / 700 / identity

Studio

Quattrocento Bold / 700 / tool name at 80%

## Make the model visible.

Reem Kufi carries the CMMF signature and selected large brand headings. Functional headings use Source Sans 3 Semibold.

## Start with the purpose.

Quattrocento carries tool names and sustained editorial reading. Source Sans 3 is the default for application text and short help.

Reem Kufi 400-700 / Quattrocento 400 and 700 / Source Sans 3 200-900 with native italics. Three SIL Open Font families; use real weights.

# Reading and working have different needs.

## Reading

Quattrocento Regular

A content model gives a team a shared description of what its content means. It names the concepts, records the intent of each field and makes the relationships visible.

## Working

Source Sans 3 Regular / Semibold

**Model name**

Customer story

Name the concept for the people using it.

Review model

Starting scale: Quattrocento 20/32 px for prose; Source Sans 3 16/24 px for UI and 14/20 px for metadata. These examples are enlarged for review.

# Choose the face by the reader's task.

### Read a sustained explanation

Quattrocento Regular: articles, longer field-intent explanations and editorial introductions. Use actual Bold for emphasis.

### Navigate, enter, scan or act

Source Sans 3: buttons, inputs, tables, navigation, metadata, tooltips and short functional help.

### Make a brand statement

Reem Kufi: the CMMF name and selected opening or section headings. Use it sparingly in products.

### Keep the distinction predictable

A one-sentence hint under an input stays Source Sans 3. A dedicated reading panel can use Quattrocento. Font choice follows the component's role.

Quattrocento has no native italic in the supplied family. Do not synthesise a slant or a weight. Source Sans 3 has native italic when needed.

# Make the system work from the stage.

### Opening and section headings

Reem Kufi Semibold, 48-72 pt. Keep titles short. Use CMMF core branding for the ecosystem; Studio branding for the tool.

### Teaching, diagrams and data

Source Sans 3, 28-36 pt for body, 22-24 pt for supporting labels. Functional slide text follows the same role as interface text.

### A short narrative or quotation

Quattrocento, 32-44 pt, with space around it. Use a concise statement; move sustained reading into speaker notes or a handout.

### Projector and partner context

Use Ink/Paper for essential text and one gradient accent. Retain an existing event or company frame when needed; do not attach it to the CMMF signature.

For CMSconf, introduce the model with a concrete example and use Studio captures to show the workflow. Use the supplied presentation handoff and slide example.

# The diagonal gives the system motion.

## A considered structure

Use aligned columns, generous margins and simple panels. Let the model and the task carry the page.

### Layout

Use a consistent 8 px base. Align text and components; allow the symbol breathing room.

### Graphic

Use a single 45-degree rising field. Crop at the edge of a composition, never through a logo.

### Texture

Prefer solid Paper or Ink. Avoid decorative cuts, repeated logo wallpaper and extra colour stops.

# A practical interface vocabulary.

## Primary action

Review model

View changes

Ink buttons, clear labels and restrained tool-colour accents. Do not rely on colour alone for status.

## Model name

Customer story

Name the model for the people using it.

Use the supplied 24 px filled icons at 24 or 48 px. These are functional icons; tool identity always uses the core symbol.

# The foundation is easy to find.

Application study / documentation landing page

CMMF

Documentation Examples Ecosystem

CONTENT MODELS / A SHARED FOUNDATION

## A shared language for content models.

Make intent visible. Describe the model once, then use it across the tools around it.

Explore the model

### Define

Capture names, fields and relationships.

### Review

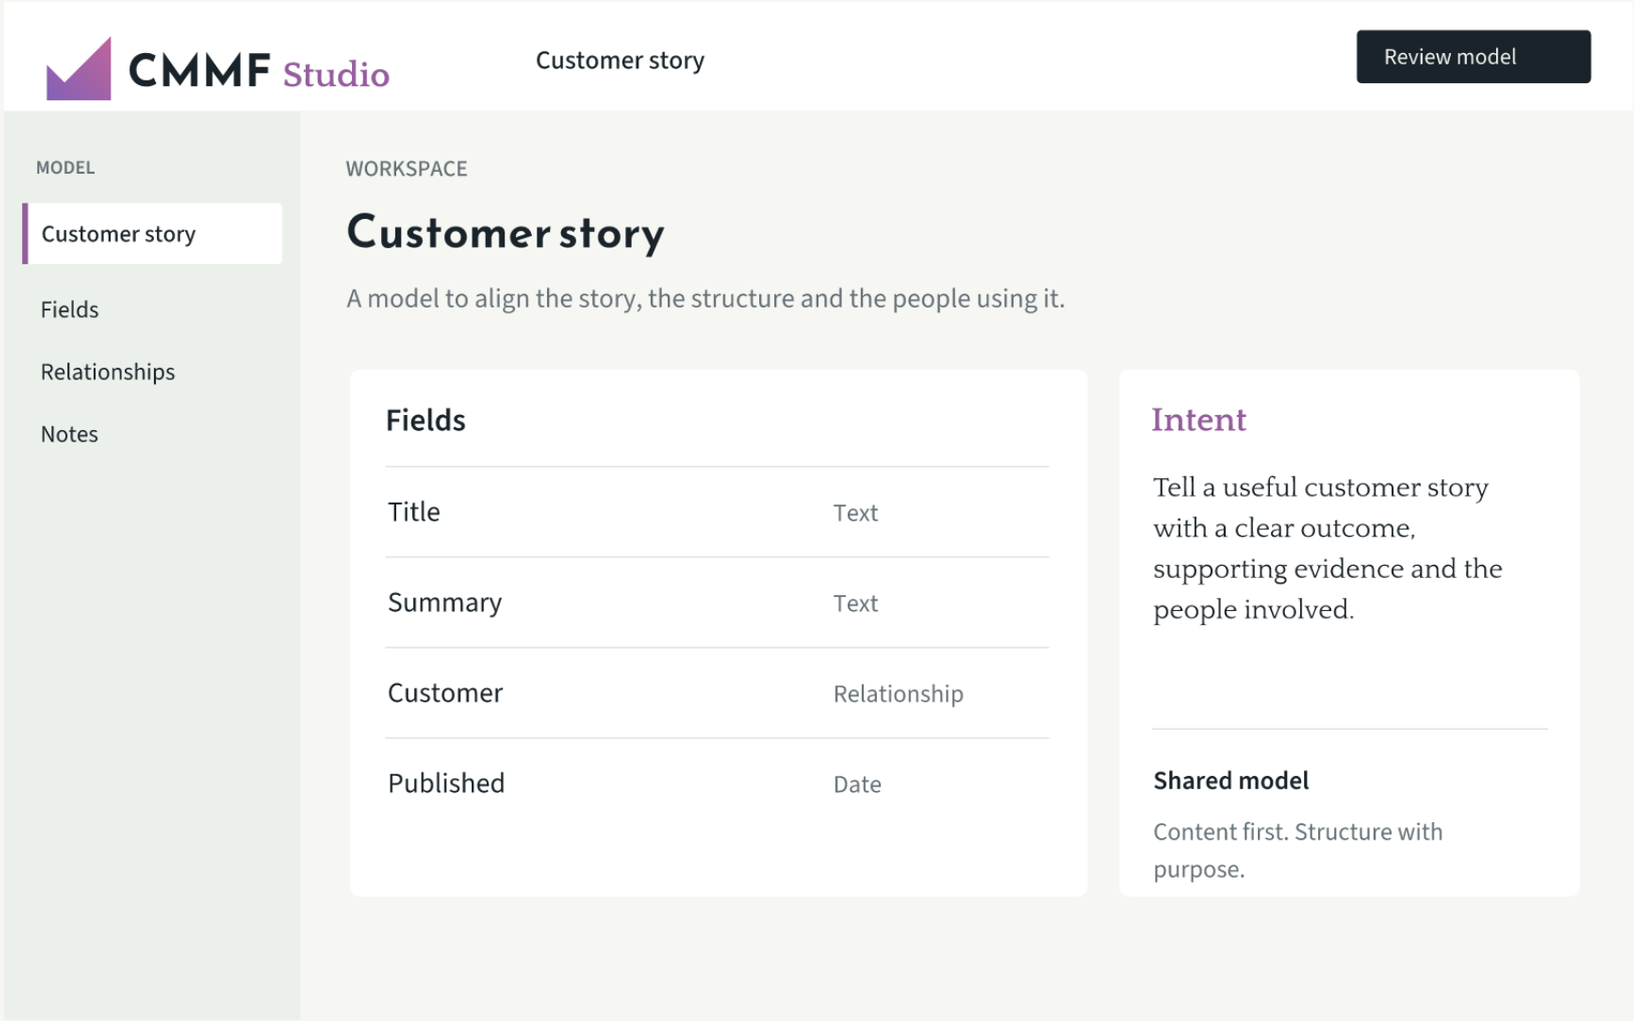

Discuss the model as a shared artefact.

### Use

Carry intent into implementation.

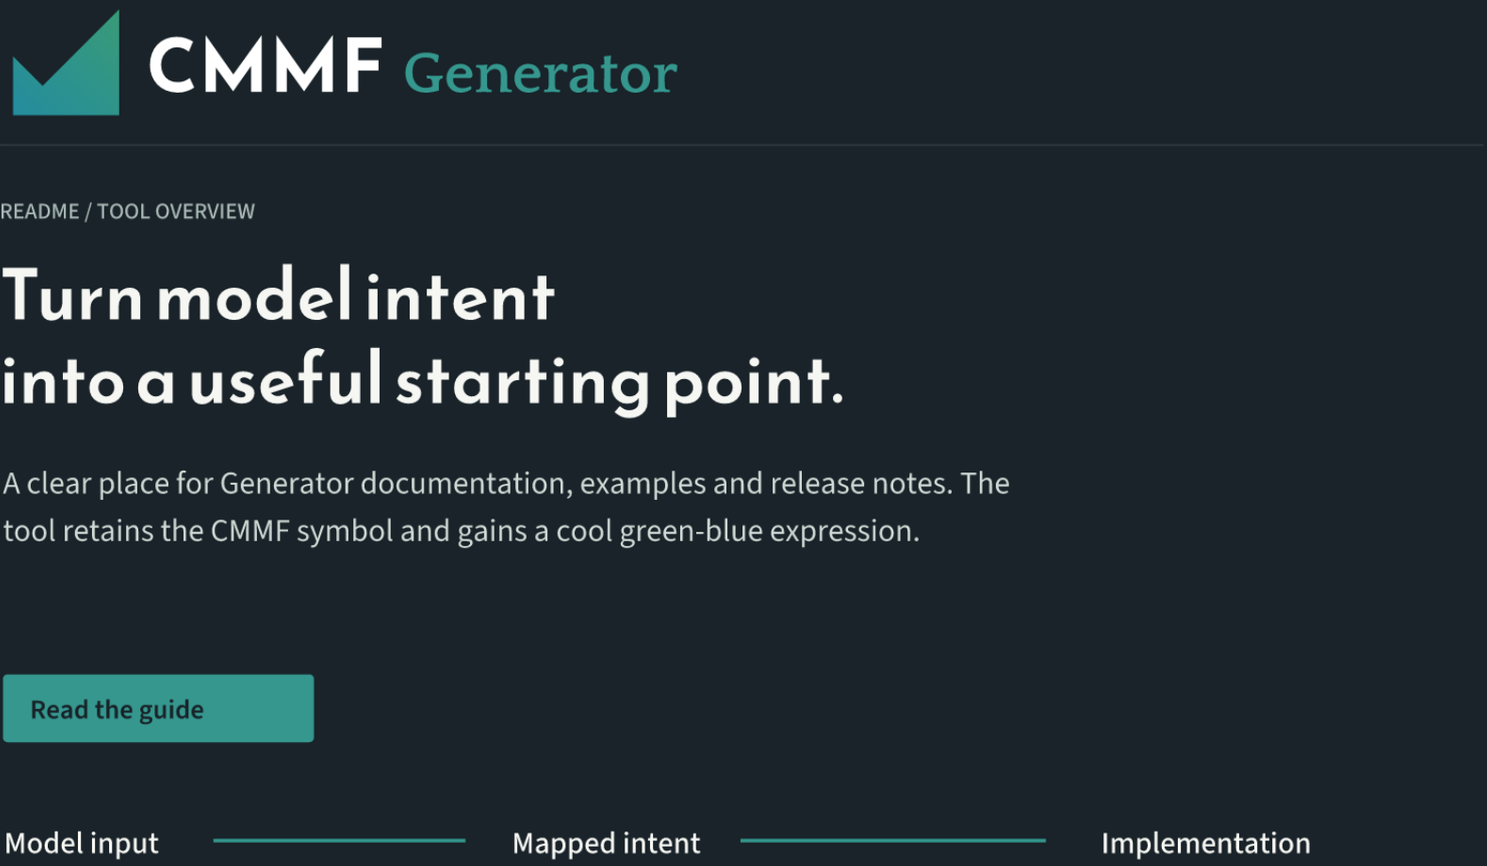

# A distinct tool, clearly in the family.

Application study / Studio workspace

# Colour connects the name and the mark.

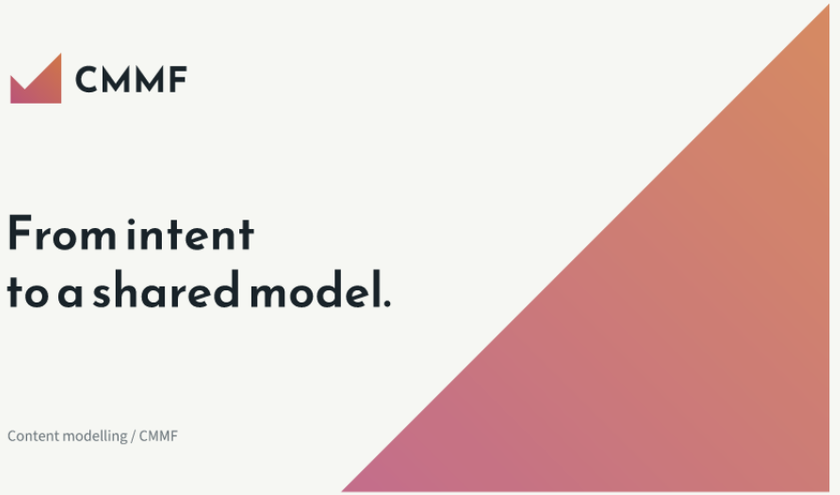

Application study / Generator repository overview

# Recognisable before the small print.

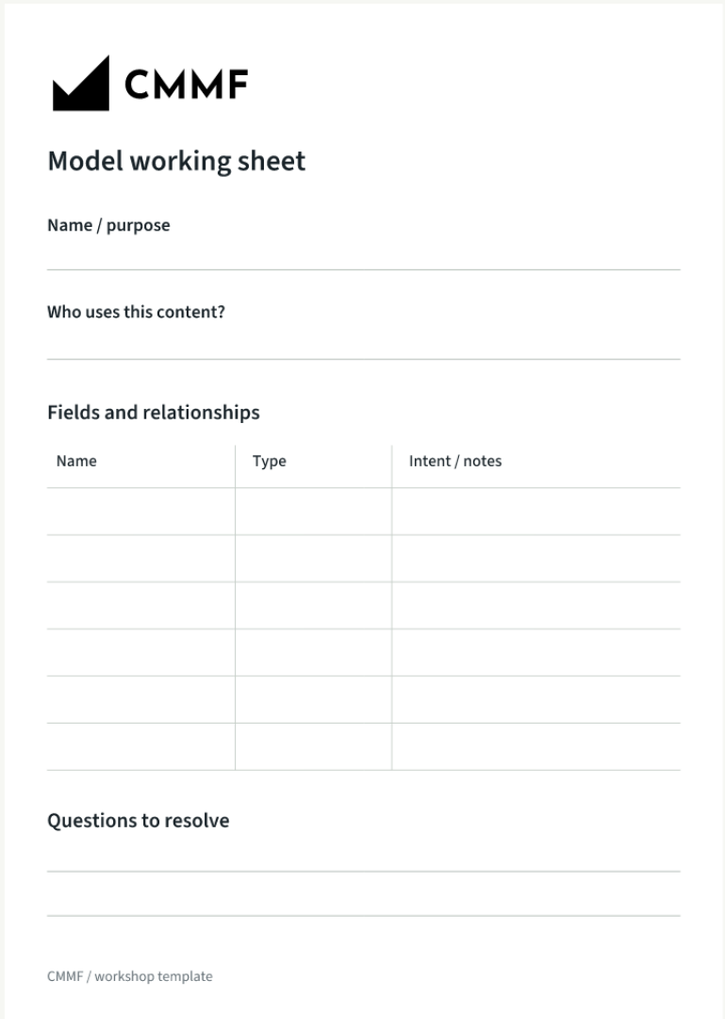

Social cards use a short statement, a complete signature and one rising diagonal. Keep text out of the artwork’s crop zone.

Presentation covers keep the same hierarchy at a larger scale. The gradient is an accent; the content stays legible.

# Useful on paper, too.

## One-colour production

The solid silhouette holds up without a gradient. Use black for office printing, stamps and budget-conscious workshop material.

## Optional attribution

If useful, credit The Headless Company in a footer or colophon. Keep that attribution separate from the signature, at body-text size.

A blank A4 model worksheet is included as an editable SVG and a vector PDF. The identity does not depend on a parent-company endorsement.

# Keep the system simple.

## Use the masters

Place an SVG at its native aspect ratio. Use black or white for single-colour output. All logo type is outlined.

## Preserve the relationship

Keep the tool name at 80% nominal type size, bold, initial capital. Align the horizontal version on one baseline.

## Let the task speak

Prefer direct, practical wording. Use Quattrocento for sustained reading, and Source Sans 3 for navigation, forms, data and short help.

## Extend deliberately

A new tool uses the same contour and type. Choose a new gradient pair and test its solid text colours on Paper and Ink.

Avoid stretching, rotations, extra notches, outlines, shadows, extra gradient stops, sentence-case parent names, or synthetic font weights.

# An entrance with a clear order.

### 01 / Rise into frame

0-1200 ms

### 02 / CMMF follows

1320-2320 ms

### 03 / Tool name settles

2600-3550 ms

Translate the unchanged symbol upward through a fixed masking window. The path never changes; nothing stretches, rotates or morphs.

Give the completed symbol 120 ms to breathe before CMMF. Wait another 280 ms after CMMF settles before introducing the tool name.

The gradient travels through every beat, settling 120 ms after the final lettering. One entrance, followed by stillness; no bounce, shimmer or loop.

# Two scales. One sequence.

| Phase | Headline<br>Delay / duration | Incidental<br>Delay / duration | Easing |
|---|---|---|---|
| **Masked symbol rise** | 0 / 1200 ms | 0 / 420 ms | cubic-bezier(.4,0,.2,1) |
| **Gradient settle** | Entire sequence + 120 ms | Entire sequence + 40 ms | cubic-bezier(.35,0,.65,1) |
| **CMMF wordmark** | 1320 / 1000 ms | 480 / 340 ms | cubic-bezier(.35,0,.65,1) |
| **Tool / descriptor words** | 2600 / 950 ms | 480 / 340 ms | Same lettering curve |
| **Breaths before names** | 120 / 280 ms | 60 / together | Still geometry; gradient moves |

Headline: 1320 ms symbol-only; 2440 ms core; 3670 ms tool; 3820 ms expanded. Lettering rises 26 / 22 units, with a subtle 1.5% / 1% scale settle.

Incidental: 460 / 860 / 860 ms. Lettering rises 3 units together at full scale. Opacity uses cubic-bezier(.35,0,.65,1). Travel scales with the placed SVG.

# Choose motion by the setting.

## A headline introduction

Use the full sequence for a deliberate opening, a presentation reveal or a prominent first introduction. Keep the final signature still.

## A small, incidental signature

Shorten the sequence and travel. Prefer the final static mark for persistent headers, navigation changes and repeated interface appearances.

## A tool or expanded name

CMMF is the second beat; Studio, Generator or the full-name descriptor is the third. Expanded-name words start 50 ms apart. Incidental lettering enters together; stacked tool names sit beneath CMMF.

## Reduced motion and repetition

Show the complete signature immediately for reduced motion. No masked rise, travel, scale or gradient movement. Never loop; replay only on an explicit request.

Start the gradient 224 units down-left on its axis: the symbol is entirely the top-right colour. Move it up-right to bring in the base colour, then stop at the master coordinates.

# Ready to put to work.

| | |
|---|---|
| **Logos & print** | SVG masters, vector PDF proofs, transparent PNG exports. |
| **Web & social** | Favicons, app tiles, avatars, banners and a release card. |
| **System & sources** | Font files and licences, JSON tokens, CSS, editable SVG applications and build scripts. |
| **Guide & examples** | This guide, seven application studies and a printable worksheet. |

The identity is authored in sRGB. Vector PDFs are RGB proofs; a print supplier should handle press-profile conversion. Interface and repository examples are design studies, not product implementations.
